# Introduction

## Go green with rotational moulding

■ Rotational moulding is a valuable resource for all garden product manufacturers. From the production of pots of almost unlimited shapes and sizes to the manufacturing of accessories such as vertical wall planters, garden edging, fences, watering cans and many other articles, rotational moulding is a point of reference in a wide range of applications.

Thanks to the possibility of moulding hollow articles with almost no limit in terms of size and shape, rotational moulding allows manufacturers to develop increasingly broad and diversified ranges of garden products for use in a variety of applications from indoor spaces to all private and public outdoor areas. The introduction of a greater number of finishes and surface decoration techniques helps rotomoulded garden products constantly improve and become more and more important players in everyday home landscape.

# Euro3Plast

## Tradition and Modernity

■ The story of Euro3plast is told by its products where tradition and innovation live together and talk to each other and where flexibility becomes the key to the future for a company that is able to interpret market changes and move with the times without losing its own identity. Euro3plast production is divided into six brands for satisfying the requirements of different types of target customers. Despite their varied nature, all items embody one single project philosophy where the quest for beauty meets technology. Euro3plast stands out not only for research, innovation, attention to details and product care but also - and above all - for environmental responsibility. A clear principle, a value translated into a corporate mission where management systems are a starting point for improving company's quality standards and environmental performance.

# Nicoli

## Collection Ops

■ Nicoli has been cooperating with gardening experts for more than 30 years. Relying on this experience Nicoli has developed a wide range of functional, high-quality rotomoulded products for decorating green spaces in line with ever-changing market trends. Among the most recognizable Nicoli products, the Ops collection includes a range of modern design pots with a unique advantage: thanks to their polygonal shape available in various sizes they can easily fit into all indoor and outdoor corners. Since the Ops pots are double-walled, they can also be used as cachepots. They are manufactured using rotational moulding in a matt, slightly rough, high-quality finish. They are the ideal solution for indoor spaces but also for terraces and gardens thanks to their resistance to UV radiation and to their thermal resistance at temperatures between -60° and +80°C

## TeraPlast

### City Line

■ City is the line of pots manufactured by TeraPlast for use in both indoor and outdoor spaces. Their neoclassic shapes perfectly fit into a variety of architectural contexts. The City pot line is manufactured using rotational moulding and includes a series of models, each of them featuring a unique functional shape. The City pots can also be used in urban environments for decorating streets and green areas such as municipal parks and public gardens. An internally lighted version is also available that makes these pots particularly evocative in the darkness.

## Slide Design

### Bamboo

■ The unique Bamboo pot designed by the French design agency Tous Les Trois and manufactured by Slide Design, embodies the innovative concept of pot/partition: a multifunctional object able to meet the most varied space organization requirements. The simple sprawling lines of a bamboo forest are reproduced in Bamboo, a thin, illuminated pot that, being 80-cm high, can also be profitably used to divide spaces with a touch of elegance.

Unobtrusive, versatile but elegantly shaped, Bamboo is the ideal solution for both indoor and outdoor spaces. Made of rotomoulded polyethylene Bamboo is available in a wide range of colors and may come in a lacquer finish and with an in-built light system.

## Poliplast

### Powder materials for rotational moulding

■ The production of thermoplastic powders for rotational moulding is Poliplast core business. Over the past few years Poliplast has accessed the European market successfully competing with major well-established multinational companies. Our aim is to stand out not only for the high quality standards of our products but also for our short delivery times, timeliness and reliability that have always been part of Poliplast DNA. Our point of strength is our wide range of products available in diverse colors to meet the increasingly specific market requirements.

Thanks to a well-equipped in-house laboratory and the collaboration with external accredited laboratories Poliplast can cooperate with its customers in tackling market challenges and meeting end user requirements.

## Rotomachinery Group

### 100% Rotational Moulding

■ Rotomachinery Group is committed to meeting all mouldmaker requirements from raw material preparation to the development of finishing accessories. Purchasing a machine, a mould or an accessory from Rotomachinery Group means starting a new production process very quickly and becoming the owner of a reliable, versatile, technologically advanced manufacturing technology, the fruit of a 45-year experience and dedication to innovation.

Our corporate philosophy has always been our constant quest for manufacturing quality. All preparation and assembly work is carried out on our shop floors and the most delicate and complex parts are assembled and tested. Every single machine is tested before delivery. Reassembly work and personnel training are very quick thus reducing commissioning time and allowing customers to immediately start production.

## Elbi - 21st Design Lab

Tao

■ The 21st Design Lab collection by Elbi is like a logbook where technical engineers and designers are like seamen starting their adventure on the open sea towards the unknown. The primary aim of Elbi is to explore: its cooperation with Italian designers allows it to expand its borders, to increase viewpoint diversity and to develop creativity. 21st Design Lab is a collection of landing points discovered and marked on the new art maps. The depth of this research also depends on the combination of materials, colors, shapes and images.

Drawing inspiration from the eternal, essential force pervading all matter in the Universe, Tao develops between two opposite polarities represented by two complementary shapes merging into one single object. The two shapes merged together create a single item looking like a two-petal flower ready to be picked.

## Roto Moulds

Moulds for rotomoulding

■ Roto Moulds was founded in Cologno al Serio (Bergamo) in 2006. The desire to become a reference mouldmaker for the rotational moulding industry helped the company grow over years until 2014 when Roto Moulds enlarged its manufacturing plant and increased its personnel. After ten years of successful manufacturing and marketing activities always aiming at customer satisfaction and loyalty, Roto Moulds is now the ideal strategic partner for all the companies operating in a wide range of industries from furnishing to building or with the most varied technologies that, thanks to rotational moulding, are able to implement their projects. Over the past few years Roto Moulds has expanded its reach while increasing its customer base also thanks to its participation in trade fairs, events and conferences.
